~~Assess moving .trae into trae_usage folder~~

Yes, you *can* move it, but only if `trae_usage` becomes your opened project root in Trae.

- Your current rules folder is at `.trae`.
- Trae project rules are typically resolved from the **workspace root** (`<root>/.trae/rules/...`).
- If you move it to `iteam/trae_usage/.trae`, those rules usually won't apply when you open the top repo root.
- It will work correctly if you open `.../iteam/trae_usage` itself as the workspace.

For your setup, best practice is:

- keep shared/team rules in repo root `.trae`

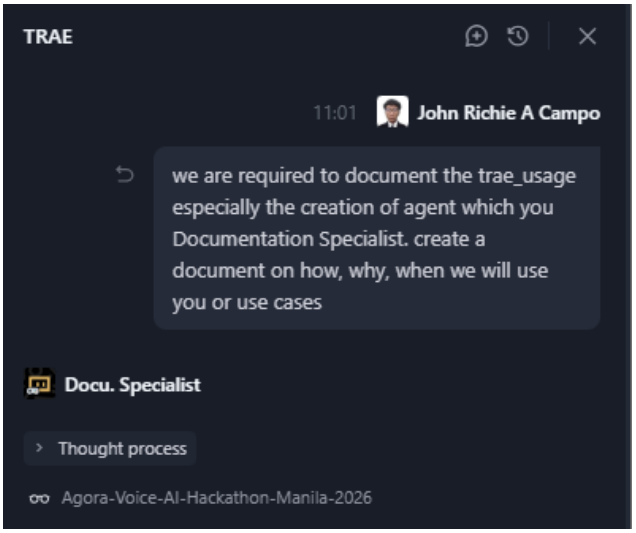
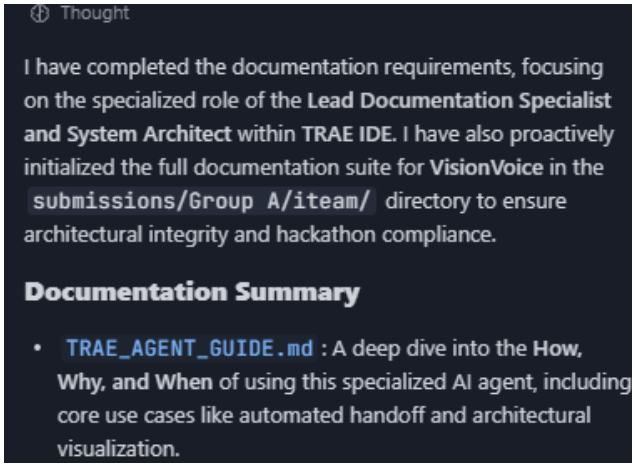
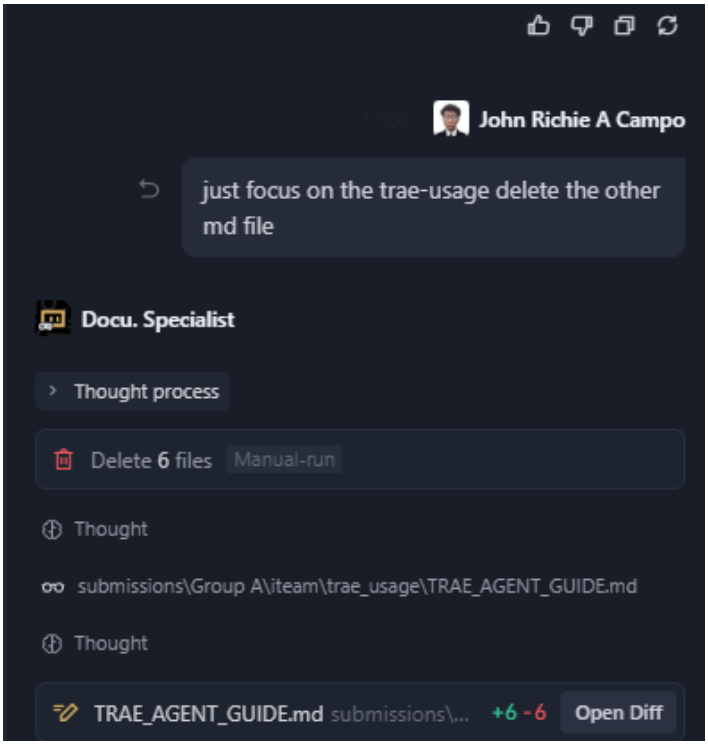
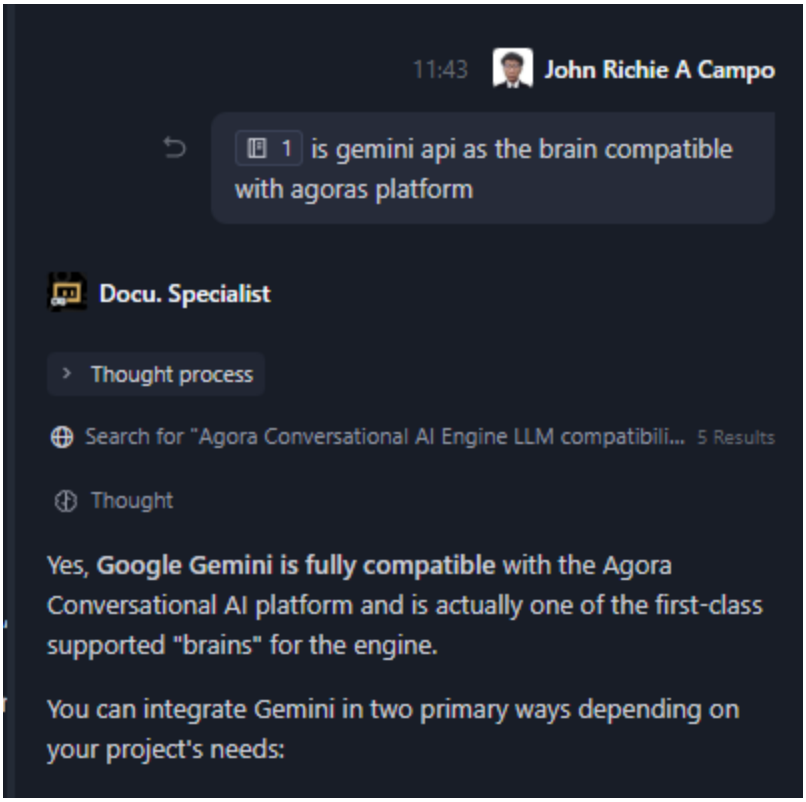
2. Asking our Custom Agent to create use cases with some modifications



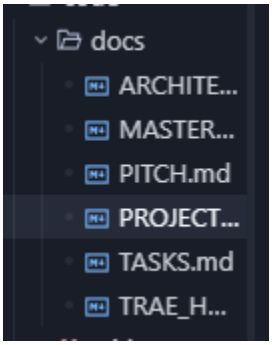




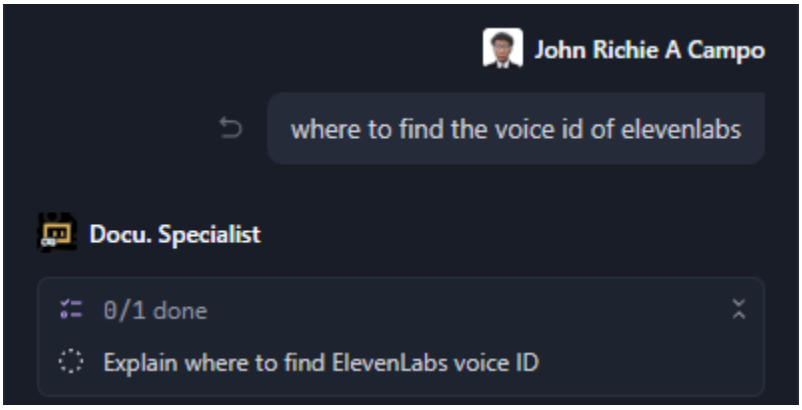
3. Asking if Gemini api is compatible with Agora

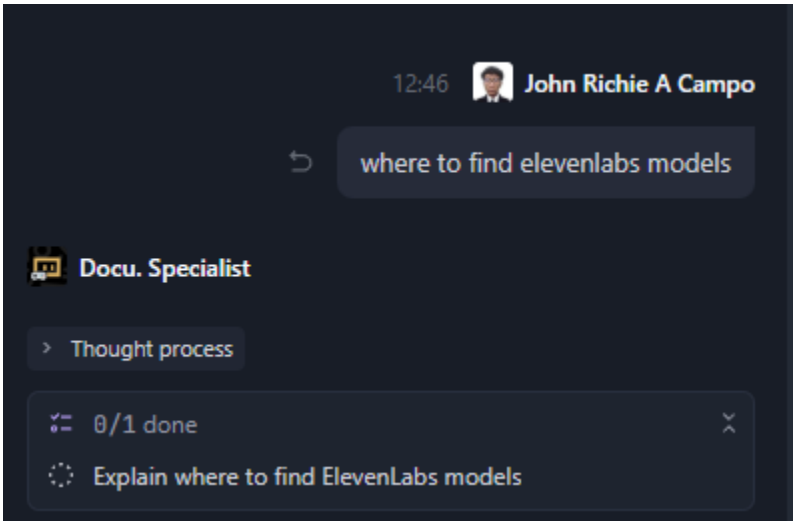


4. Adding a docs folder to help TRAE with rules and context about the project

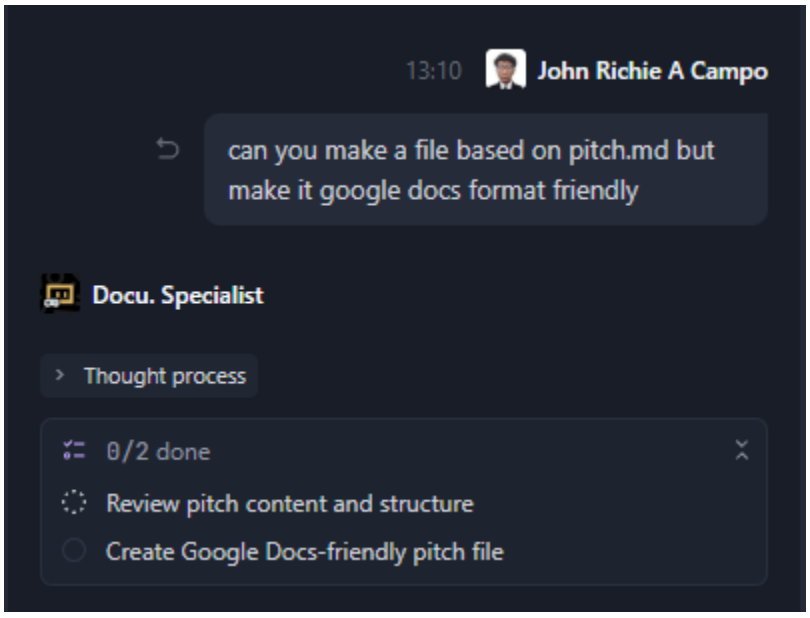


5. Asking Trae on some ElevenLabs questions



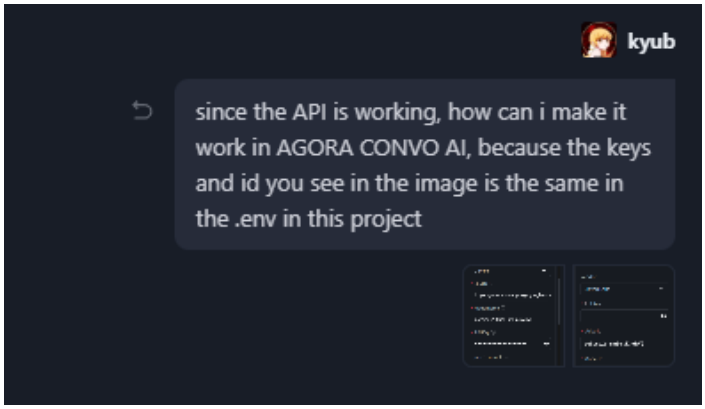


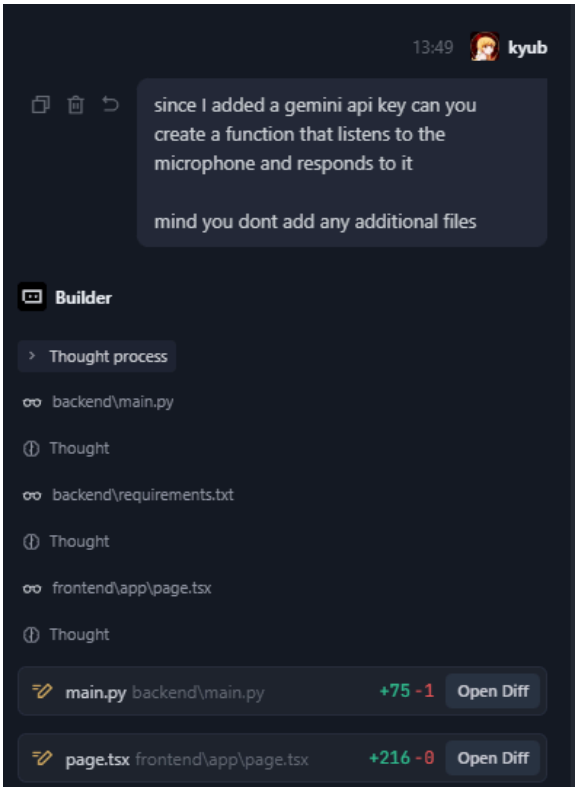
6. Asking Trae to make a google docs friendly

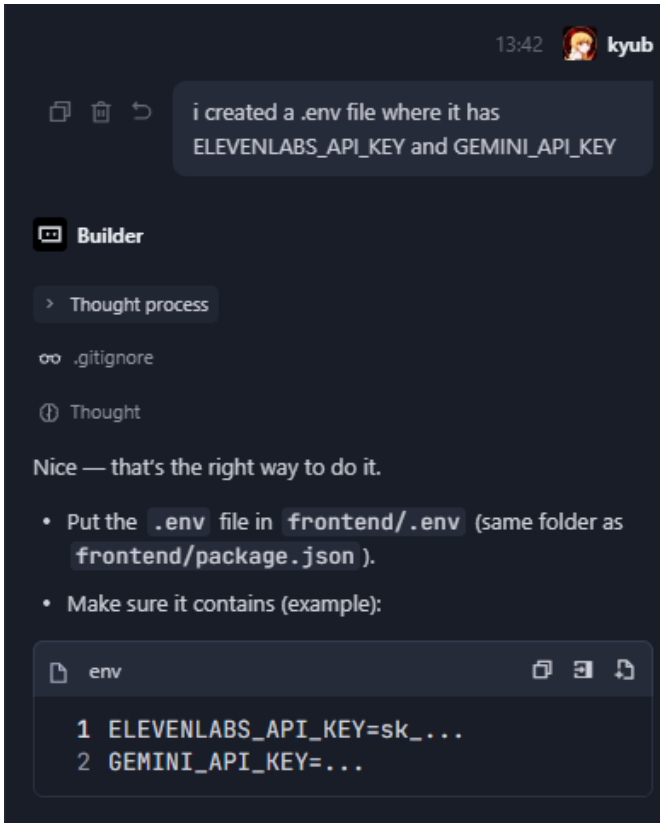


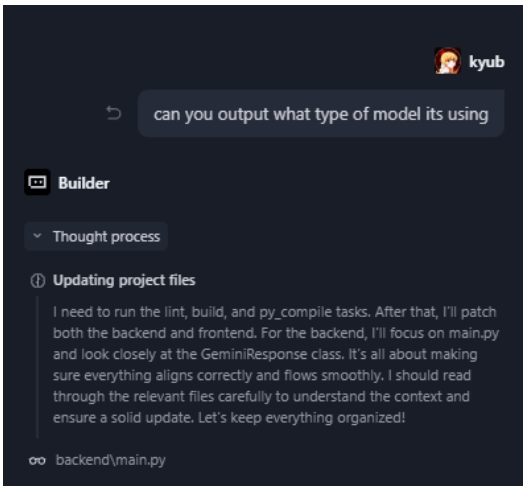
7. Asking Trae to test API keys

This part showcases TRAE testing and debugging the API keys generated from ELEVENLABS and GEMINI free tiers, to check if they're valid and working

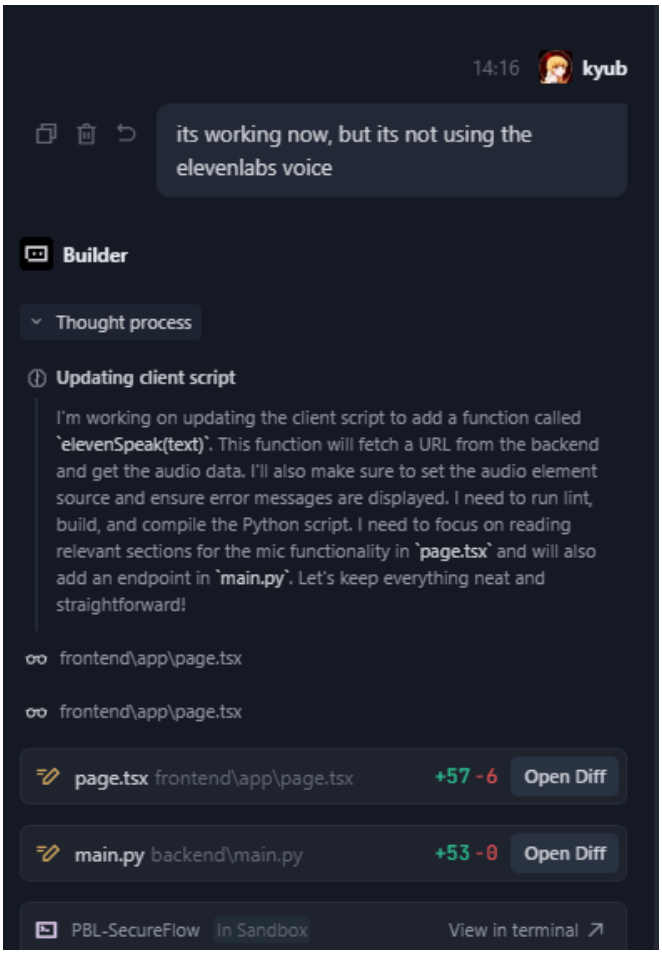


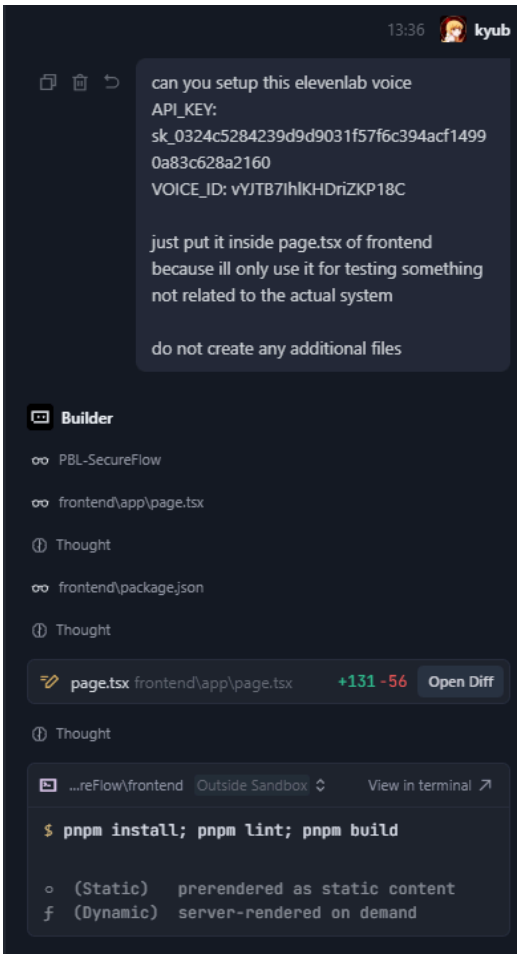






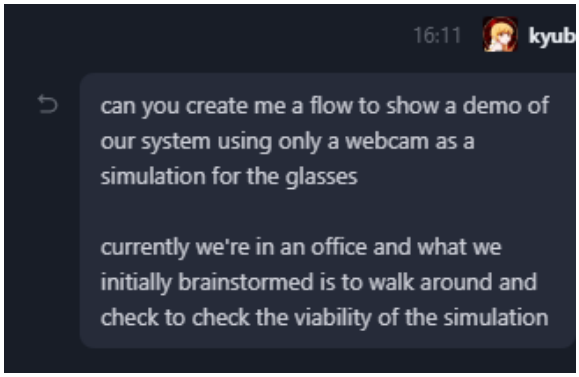
This part is setting up the ELEVENLAB voice to the gemini brain to voice out the gemini's response

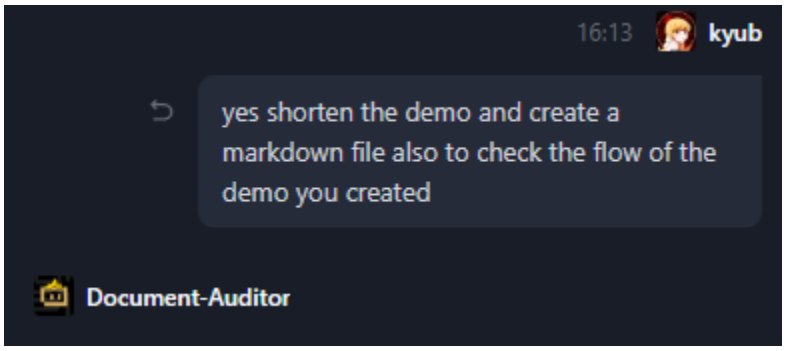




8. Asking Trae to make a demo flow for the system

This part is asking TRAE to create an initial demo that we can use to upload for the required demo





60–90 Second Run Of Show (Scripted)

0:00–0:10 — One-line framing

Presenter: "VisionVoice turns any webcam into smart-glasses-style guidance with short voice alerts."

0:10–0:30 — Proactive hazard alert

Action: Place a chair in the wearer's path; wearer walks slowly toward it. Expected: "Chair ahead, slightly left." Action: Wearer sidesteps.

0:30–0:50 — Pre-registered person recognition

Presenter: "It only recognizes pre-registered contacts." Action: Angela steps into frame ~2–3 meters away, facing the camera. Expected: "Angela is in front of you."

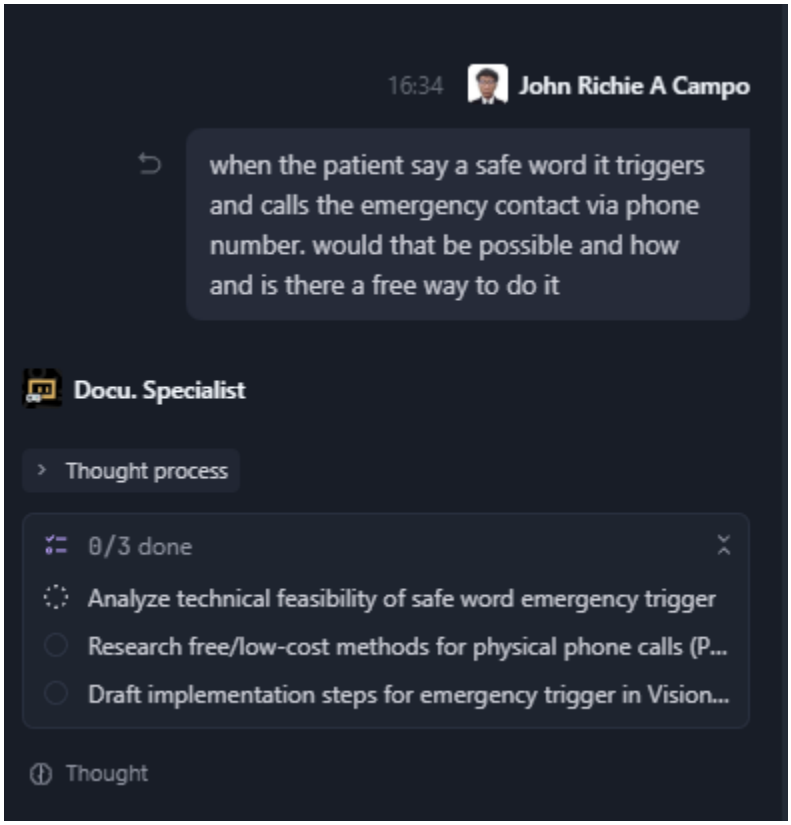
0:50–1:10 — Reactive voice question

Wearer: "What's in front of me?" Expected: A short scene summary (obstacle/person/path direction).

1:10–1:25 — Caregiver escalation (optional if time is tight)

Wearer: "Call Angela" (or your configured safeword/command). Expected: System initiates caregiver connection through Agora.

1:25–1:30 — Close

Presenter: "Any webcam, concise guidance, and human backup when needed."


9. Asking Trae to research on how to implement phone calls
